

Yura Yurev

SENIOR PHP & JAVASCRIPT DEVELOPER

mobile: +44 7933 838037 email: yuriev Yuri@live.com linkedin: <https://bit.ly/4yxdtE5> address: London, SE22

PROFILE

Senior full-stack developer with 10+ years of experience designing and building business-critical internal web applications, including CRM platforms, dashboards, back-office systems and third-party integrations for organisations across the US, UAE and UK. Experienced across the modern web stack including PHP (Symfony), JavaScript (React/Next.js), AWS, and CI/CD, with strong track record of modernising legacy applications and translating complex or evolving business requirements into scalable, reliable, and maintainable software solutions.

With background spanning both business and engineering, I easily translate business needs into robust technical solutions, turning high-level objectives into well-designed software that delivers measurable business value.

SKILLS

- Languages: PHP, Go, JavaScript (ES6+), TypeScript
- Frameworks: Symfony/Laravel, Bitrix24, React, Next.js
- Cloud: AWS (EC2, RDS, SQS, EventBridge, CloudWatch, Lambda, Step Functions)
- DevOps & Infra: Docker, Linux (CentOS 7/9, Oracle Linux 9, Ubuntu, Amazon Linux 2023), Nginx, GitLab CI/CD, Git/GitFlow, Asterisk/PBX, MySQL, PostgreSQL, Redis
- Testing: PHPUnit, X-Debug, Playwright (end-to-end)
- Practices: OOP, SOLID, Domain-Driven Design (DDD), ORM, Test-Driven Development (TDD), CI/CD, refactoring, legacy modernization, blue/green deployments, REST API, Agile/Scrum, AI-assisted development (Claude Code)

EXPERIENCE

Senior Developer at Currency Solutions

Jul 2023 – Present

London, UK

<https://currencysolutions.com>

- Rebuilt the company's telephony from the ground up — re-engineered Asterisk and the PBX infrastructure and integrated them with a custom in-house application, bringing call management, routing and customer records into a unified platform.
- Integrated WhatsApp Business into the CRM via the Twilio API, including approved message templates and compliance with the 24-hour messaging window, enabling client conversations to be managed directly within the CRM while adhering to WhatsApp rules.
- Modernised a complex, procedural PHP codebase by introducing clean, modular, service-oriented code the team can test and maintain through PHPUnit coverage and X-Debug-base troubleshooting.
- Established Symfony as the core framework for the CRM platform, introducing dependency injection, queues, a structured service layer, enabling faster and more reliable feature development.
- Implemented modern engineering practices, including background processing, structured logging and distributed tracing (Monolog, OpenTelemetry) to improve platform observability, reliability and maintainability.
- Migrated core systems to AWS (EC2, RDS, SQS, EventBridge, CloudWatch), optimising workloads through asynchronous processing and implementing GitLab CI pipelines with zero-downtime blue/green deployments.
- Developed a Go service on AWS Lambda to automate file transfers between systems, improving data flow efficiency between services and eliminating manual processing steps.
- Managed production and staging environments (Oracle Linux 9), built a custom Docker Compose setup for the team, and wrote Symfony console commands for routine ops, including onboarding, data clean-up, log control, reports; produced technical documentation and user support.
- Partnered with the business, to translate business requirements into deliverable technical solutions, and mentored developers on the Symfony architecture and best practices.

Team Lead / Senior Developer (part-time) at Provident Estate

Feb 2024 – Jun 2026

Dubai, UAE (Remote)

<https://providentestate.com>

- Migrated the platform from DigitalOcean to AWS — EC2 for the app, RDS for the database, SQS for async queues, CloudWatch for monitoring — with structured logging and automated backups. This created a stable foundation for future build.
- Instrumented individual parts of the application with custom AWS CloudWatch metrics, alongside centralised logging, enabling live monitoring of component-level behaviour in production and faster incident response.
- Set up CI/CD for staging and production with blue/green releases on EC2, eliminating downtime during releases.
- Provided the dev team with a shared Docker environment, simplifying onboarding and local setup.
- Wrote Go tooling to spin up copies of the platform fast and bulk-edit values straight in the database, turning a slow, manual setup into a quick, repeatable process.
- Built a standalone React/Next.js dashboard (TypeScript, MUI) with real-time employee KPIs, used across a 500-person company — served by a custom REST API I added to the platform, with modular widgets configurable individually.
- Led a team of 4 developers and designers, covering code reviews, sprint planning, and the standards we worked to.
- Established Symfony as the base for new modules, the same approach used at Currency Solutions.

Full-Stack Developer (PHP/JS) at ViDa Select

May 2022 – May 2024

USA (Remote)

<https://vidaselect.com>

- Replaced years of kernel-level hacks with supported, upgrade-safe code.
- Built a custom task-queue module with RPA to automate manual back-office processes.
- Overhauled the automated business processes the operation runs on — adding CLI tooling and tests so they ran reliably instead of breaking silently.
- Integrated third-party MSSQL tables with the platform's ORM and built a module to sync data across separate databases.
- Set up two-way synchronisation between the CRM and Ontraport, so records stayed aligned across both systems.
- Developed internal utilities and small in-house apps for the team, alongside day-to-day user support.

Full-Stack Developer (PHP/JS) at Medical Solutions JSC

Sep 2019 – May 2022

Moscow, Russia

<https://fillersbotox.ru>

- Delivered custom CRM features without breaking the core system — working with both the standard and the undocumented CRM API.
- Cleaned out intrusive hacks left by previous developers and rebuilt those parts properly.
- Built a custom job queue from scratch in pure PHP on Redis, so background work could run without pulling in a heavy framework.
- Lead the move to WhatsApp Business within its strict rules: chat controls, open lines, broadcast mailings and CRM entities — client side in pure JS, server side handling validation and the WhatsApp Business API.
- Ran the launch of a new multilingual online store on a rebuilt core (Bootstrap 4) as project manager — cleared a large backlog of bugs and the store got noticeably faster.
- Added the supporting systems around the CRM — open-line messaging, a pipeline from lead generation through to closed deal, and data exchange with the 1C ERP.

EARLIER EXPERIENCE

IT Specialist (PHP/JS, project) at All Heart Homecare Agency

Dec 2019 – Mar 2020

Brooklyn, USA (Remote)

- Built direct Facebook lead-gen into the CRM via Zapier hooks and a custom REST layer; added an on-the-fly AJAX upgrade to the incoming-call popup (pure JS front, PHP back) that sped up the call centre and cut data-entry errors.

CRM Developer (PHP/JS) at Interunis JSC

Feb 2019 – Sep 2019

Moscow, Russia

- Developed modules and components for a self-hosted CRM platform (labour-safety control in the extractive industry), including enhanced email-exchange control — all without hacking the core.

CRM Programmer at StoneHedge JSC

Jul 2015 – Oct 2018

Moscow, Russia

- Full-cycle real-estate developer. Built modules and components on a self-hosted CRM platform (REST API): project management, business processes, telephony (Asterisk), open-line chat (WhatsApp/Viber/Facebook/Instagram) and a PowerBI-facing API. Built an apartment-viewing tracker with reporting and SVG/PDF price lists driven by CRM data.

Business-Systems Implementation & IT at various organisations

2009 – 2015

Moscow, Russia

- Moved from business and management roles into implementing business systems — 1C ERP rollouts, my first 1C-Bitrix (CRM) projects, and a full DocsVision EDMS implementation (writing the specs, leading the dev team, training users), alongside company IT and server administration. This is where the CRM work I've specialised in ever since began.

Sound Producer at Extraphone

2001 – 2009

Moscow, Russia

- Worked at the professional in-house studio of a major record label — a serious commercial setup, not a home operation. Maintained and improved its hardware and software (Logic Pro, Cubase) and produced music, arrangements and commercials. Hands-on with genuinely complex technical systems, years before I moved into software.

EDUCATION

MBA

Moscow International Higher Business School MIRBIS, Moscow, Russia

BA in Public & Business Administration

RANEPA (Russian Presidential Academy), Moscow, Russia

BSc in Economics

Saratov Socio-Economic Institute (Plekhanov Russian University of Economics), Saratov, Russia

Project management with Oracle Primavera P6

Professional course

LANGUAGES

English — full working proficiency

Russian — native
